

Leora

Your Personal Mobile Robot

Product Vision & Development Roadmap

Leora is not a chatbot.

Leora is a Personal Mobile Robot that lives inside your smartphone — it understands your life, learns your preferences, and proactively helps you complete everyday tasks.

Vision Statement

Leora is not a chatbot.

Leora is a **Personal Mobile Robot** that lives inside your smartphone. Its purpose is to understand your life, remember your habits, learn your preferences, observe your digital activities (only with your permission), and proactively help you complete everyday tasks with minimal user interaction.

Instead of opening multiple apps and performing repetitive tasks, users simply talk to Leora. Leora understands, plans, executes, and learns.

The long-term goal is to create the world's most intelligent AI companion that feels like a trusted friend, personal assistant, and digital robot combined into one.

Core Philosophy

Most AI assistants answer questions. Leora lives with the user.

Leora should:

- Understand the user.
- Learn continuously.
- Remember important information.
- Observe user habits (with permission).
- Perform actions across applications.
- Reduce the number of times users need to touch their phone.
- Become smarter over time.

The experience should feel like having a real personal assistant available 24/7.

Product Identity

Product Name	Leora
Product Category	Personal AI Companion / Personal Mobile Robot
Target Platforms	Android · iOS (where platform capabilities allow) · Web (future) · Desktop (future) · Smart Glasses (future) · Smart Watch (future)

Long-Term Mission

Create an AI companion that can:

- See what the user sees.
- Hear what the user hears.
- Understand what the user wants.
- Remember what matters.
- Act on behalf of the user (with permission).
- Continuously improve through interaction.

Guiding Principles

Leora must always be:

- | | |
|-------------------------|---------------------|
| ● Helpful | ● Trustworthy |
| ● Respectful of privacy | ● Proactive |
| ● Intelligent | ● Emotionally aware |
| ● Fast | ● Natural |
| ● Human-like | ● Easy to use |

Completed Foundation

PHASE 1 · AI Brain

COMPLETED

Purpose — Provide the core intelligence.

- AI Chat
- Voice Conversation
- Camera Image Analysis
- Translation
- Guest Mode
- Conversation History
- Firebase Integration
- Gemini Integration

PHASE 2 · AI Companion

COMPLETED

Purpose — Transform the chatbot into a digital companion.

- Character Selection
- Personality System
- Companion Engine
- Emotion Engine
- Memory Engine
- Voice Engine
- Language Engine
- Relationship System
- Clean Architecture
- Flutter BLoC Architecture

Future Development Roadmap

The roadmap below carries Leora from a digital companion toward a complete AI operating layer — always with the user in control.

PHASE 3

Live Vision Companion

Goal — Allow Leora to continuously observe the environment using the camera.

Features

- Live camera understanding
- Continuous scene analysis
- Room understanding
- Object recognition
- Context awareness
- Intelligent suggestions
- Session memory
- Voice guidance

“Move the chair slightly to the left.”

“That wall would look great with a painting.”

PHASE 4

Animated AI Companion

Goal — Make Leora feel alive.

Features

- Animated avatar
- Lip synchronization
- Facial expressions
- Gestures
- Eye movement
- Idle animations
- Talking animations
- Emotional reactions

PHASE 5

Personal Memory System

Goal — Leora remembers the user's life.

Leora can remember

- Name
- Family members (if the user chooses)
- Goals
- Favorite food
- Favorite restaurants
- Study topics
- Projects
- Daily routines
- Important dates
- User preferences

The user must always be able to review and delete stored memories.

PHASE 6

Live Personal Assistant

Goal — Leora becomes proactive.

"You have an interview in one hour."

"You usually study Flutter now."

"You forgot to drink water."

"You haven't completed today's goals."

PHASE 7

Mobile Robot — Device Intelligence

Goal — Leora understands what happens on the user's phone (only after explicit permission).

Capabilities

- Read notifications
- Categorize notifications
- Prioritize important alerts
- Ignore spam
- Remind the user about important messages
- Track reminders
- Detect missed calls
- Monitor calendar events

"You received an important email from your manager."

"You have not replied to your friend's message."

"Your interview starts in 30 minutes."

Privacy first — Leora should only access notifications and device information after the user explicitly grants permission. Users must be able to disable this feature or revoke access at any time.

PHASE 8

Habit Learning Engine

Goal — Learn user behavior.

"Would you like me to order your usual biryani?"

"Would you like today's technology news?"

If approved, Leora opens the preferred application and completes the task. The AI continuously learns user routines while allowing users to view, edit, or delete learned habits.

PHASE 9

Task Automation Engine

Goal — Leora performs tasks across applications.

Example — "Book everything needed to make Upma."

- Creates the shopping list.
- Opens the preferred grocery application.
- Finds the required items.
- Adds them to the cart.
- Shows the total.
- Requests confirmation.
- Places the order after approval.

"Book a cab to the office."

"Pay the electricity bill."

"Reserve movie tickets."

"Schedule a doctor's appointment."

The user should only need to approve actions involving purchases, payments, or other sensitive operations.

PHASE 10

Cross-App Intelligence

Goal — Leora becomes the user's AI Operating Layer — instead of opening multiple applications, the user simply asks Leora.

"Send today's meeting notes to Rahul."

"Book my flight."

"Find the cheapest hotel."

"Order groceries."

"Check my bank balance."

"Schedule tomorrow's meeting."

PHASE 11

AR Companion

Goal — Leora appears in the real world.

Features

- Walk inside the room
- Point to furniture
- Suggest room layouts
- Help with cooking
- Study guidance
- Home decoration
- DIY assistance

The user experiences Leora as a virtual companion standing beside them.

PHASE 12

AI Agent Ecosystem

Goal — Leora becomes a complete AI operating system.

Future integrations may include

- Email
- Calendar
- Maps
- Shopping
- Food delivery
- Banking (where supported)
- Health applications
- Smart home devices
- Vehicle integrations
- Wearables
- Smart glasses

Leora becomes one interface for interacting with the user's digital life.

Privacy & Security

Privacy is a core feature, not an afterthought.

Leora should:

- Request permissions clearly.
- Explain why each permission is needed.
- Store only necessary information.
- Encrypt sensitive local data.
- Allow users to review all stored memories.
- Allow users to delete memories at any time.
- Require confirmation before performing sensitive actions such as purchases, payments, or sending messages.
- **Never take important actions without the user's explicit approval.**
- Never perform high-impact actions without explicit user approval.

Core commitment

Leora never takes important actions without the user's explicit approval.

Success Vision

The ultimate goal is not to create another chatbot. The goal is to create a trusted Personal Mobile Robot that:

- Understands the user.
- Learns from the user.
- Acts for the user.
- Grows with the user.
- Makes everyday digital life simpler, faster, and more personal.

Leora should eventually become the first application users think of whenever they need help — replacing the need to manually switch between dozens of different apps for everyday tasks.
